EXTRACTION SOLVENTS USED WITH THE TD-500D

The TD-500D is compatible with all popularly used extraction solvents. Hexane is the most popularly used extraction solvent because of its low cost, easy availability and disposability.

The following is a list of extraction solvents used by our TD-500 customers:

**Lighter than Water Solvents:**

- Pentane
- Hexane
- Cyclohexane
- Heptane
- Octane
- Xylenes (high blank reading)
- Toluene (high blank reading)

**Heavier Than Water Solvents:**

- Freon
- Vertrel MCA
- Ashikleen AK-225
- Chloroform
- Carbon Tetrachloride
- Horiba S-316
- Methylene Chloride

Note that some of these solvents are not ideal due to low boiling point (such as pentane) or from health perspective (chloroform).
